This strobing controller goes between your stock wiring and your LED brake light bulbs. Make sure to read and understand all instructions before attempting installation. You will only need one controller for 2 LED brake light bulbs.

You will only use one of the BLUE OR WHITE wires, NOT BOTH.

RFID : Connect to the 12 Volt (+) Positive Wire coming from the vehicle  
BLACK : Connect to the Ground (-) wire coming from the vehicle  
BLACK : Connect to the Ground (-) wire of the LED Brake Light Bulbs  
BLUE : 12V (+) STROBE MODE A  
WHITE : 12V (+) STROBE MODE B

BLUE wire (STROBE A) - Light strobes until brake is off  
WHITE wire (STROBE B) - Strobes for 2 seconds, then lights up solid until brake is off

FOR USE WITH LED TAIL LIGHT BULBS ONLY
Using with standard (Glass) tail light bulbs will overload the controller and void your warranty.
